

UpGrade™ your elementary report cards to a more professional level!

Take a look at what UpGrade™ can do:

- Enter, edit, and print report cards—anywhere, any time
- See student photos on-screen or print on report cards
- Supports multiple classes, buildings, and grade levels per teacher as well as multiple report card formats for each student and for each grade, and multi-page report cards or multiple report cards per page
- Supports specials, split-classes, and team-teaching
- Includes spell check and print preview features
- Users can use graphical, spreadsheet, or yearly data entry—whichever they prefer
- We can link directly to most NCS Pearson SASIxp installations and import data from NCS Pearson's CIMS product and other popular student management systems

Secure access to your cards from home or school

- Teacher, building, and District-level security capabilities
- Semester security can prevent changes after marking period closes
- Can use your existing Microsoft® Active Directory (ADS) network logins and local database security with no new passwords for your staff to remember

Report cards can be printed through any browser

- For convenience, you can also print rosters, class lists, attendance and mailing labels
- Produces black & white or color PDF report cards through a web browser

Easily changeable and flexible to handle your toughest cards

- Standard, District-defined comments can be combined with text to create custom comments and narratives for each student
- Report card formats, data entry, and fields can easily be changed by District staff using our menu-driven administrative system

Creates digital CA-60 with a single click

- Creates an electronic PDF archive of all report cards at the end of the marking period—use for digital CA-60 or for easy retrieval if students leave the District

Web-based elementary report cards

Customization

We specialize in the unique needs of K-12 districts. Upgrade™ is fully customizable to your preferences—colors, logos, text and data fields.

Your data stays in your district

Upgrade™ is installed in your district, on your server. It's browser-based so you just need a standard Internet browser to use it. Upgrade™ is built on industry-standard products, including Microsoft® Windows operating system, IIS, and SQL Server database. We work with your IT staff to integrate it into your existing website & network, so the installation is fast and easy.

Affordable pricing

We offer a one-time fee that is based on the size of your school district and your particular needs.

Training

Because Upgrade™ is so user-friendly, most training usually takes less than an hour. Training is included and additional support is always available.
